

## ABOUT US

A duly registered Philippine Corporation primarily engaged in providing modern high quality equipment and pre-fabricated houses for poultry and livestock. MFC's partnership with industry leaders in the region and our dedicated support to customers enables us to become a benchmark of quality for providing agricultural products and services.

## Why Choose Us?

PLANNING AND  
COST ESTIMATION

BANK LOAN  
ASSISTANCE

LAND PREPARATION  
AND  
CIVIL WORKS

INSTALLATION OF  
PREFAB BUILDING  
AND EQUIPMENT

AFTER SALES  
SERVICES AND  
24/7 HOTLINE

And Modern Equipment for Poultry and Livestock*

**Manual Harvest Broiler Cage System**

# Broiler cage - manual moving out cage system

## Main Body System

- Main structure is zinc-free hot galvanized plate, the thickness of zinc coating is 275g per square meter. Post welding hot dip galvanized process is adopted for the whole cage wire; special galvanization process is adopted and there is no zinc dreg, endowing a long service life.
- Transverse and longitudinal connected structure is sound and reliable as well as simple and highly efficient, ensuring the stability of cage body without collapse.

## Manure Cleaning System

- The longitudinal manure belt is made of 1.0mm pp material, with smooth surface and high intensity. Without belt off-tracking, the manure can be cleaned completely and thoroughly.
- Cross manure cleaning frame part is integral hot galvanized. The conveyor belt is made of PVC material, seamless connection design, mounted directly in integral circle, which assures the intensity and long-lasting service life.

## Feeding System

- Two options for feed supply; sowing mode and hopper trolley mode
- Advantage for sowing type feed supply: simple and efficient structure, lower price, more suitable for newly built poultry house.
- Advantage for hopper trolley feed loading: compact structure, smooth and accurate feed drop. It takes up smaller space, which will not interfere with lights drooping arrangement. Its application requires less of poultry house floor flatness.

Overall height of the cage is only 1910mm, height of crib at top layer is only 1540mm, facilitating feeders to observe chicken group and catch them. It can reconstruct chick house in combination with driving type feeding machine.

## Water Supply System

Integral controlled water supply lifting system, quality reliable and leakage proof. This system reduces the labor intensity and avoid drinking line damage caused by operation failure.
